Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1 (Currently amended).   A method of modifying an image to be displayed on a display;

     (a)   receiving <u>at least a portion of</u> said image; and

     (b)   modifying said image <u>to alternatively increase or decrease said at least one pixel's luminance output</u> by ~~alternatively~~ overdriving at least one pixel of said image<u>, for a current frame, to a current value that is selected</u> based upon:

        (i)   <u>at least one</u> ~~the~~ predicted displayed luminance value of said pixel in ~~a~~ <u>respective ones of at least one subsequent frame of said</u> ~~previous~~ image<u>; and</u>

        (ii)   <u>at least one previously displayed luminance value of said pixel in respective ones of at least one previous frame of said image</u> ~~to increase or decrease said at least one pixel's luminance output~~.

2 (Currently amended).   The method of claim 1 wherein said <u>at least one previously displayed luminance value of said pixel are stored in respective frame buffers</u> ~~image is the next sequential frame after said previous image~~.

3 (Currently amended).   The method of claim ~~1~~<u>2</u> where <u>a first</u> said ~~predicted actual~~ <u>previously</u> displayed luminance value is at a state where liquid crystal material associated with said pixel of said display is not at an equilibrium state<u>, and where a second said previously displayed luminance value is at a state where said liquid crystal material</u>

associated with said pixel is at an equilibrium state, and where said second said previously displayed luminance value is from the earliest sequential said at least one frame, upon which selection of said current value is based.

4-113 (Canceled).
